SECTION 1

Overview

Jugnu for go_router is an editor extension that shows, checks and documents the routes in a Flutter app that uses go_router. It reads your Dart files directly, so it works without running the app or a build step.

Feature	What you get
Routes view	Your whole router as a tree, with one click to the code
Completion	Real paths and route names while you type navigation calls
Warnings	Unknown paths, unknown names and missing parameters, with quick fixes
Navigation	Go to definition, find references, hover details and usage counts
Route diagram	A searchable map of routes and redirects, exportable as an image
Editing help	Add routes in three prompts and convert routes to typed routes
Route reports	A printable, password-protected PDF of your routes and issues

SECTION 2

Requirements

Item	Requirement
Editor	Version 1.85 or newer, with access to the extension Marketplace
Project	A Flutter project with a `pubspec.yaml` that uses go_router
Operating system	macOS, Windows or Linux

SECTION 3

jugnu 1.0.0 · Sanket Santosh Vidya Manohar

Installation

From the Marketplace

1. Open the Extensions view from the activity bar, or press Ctrl+Shift+X (Cmd+Shift+X on macOS).
2. Search for **Jugnu for go_router**.
3. Check that the publisher is **sanket-manohar**, then select **Install**.
4. Open a Flutter project. Jugnu starts on its own when the folder contains a pubspec.yaml.

© 2026 Sanket Santosh Vidya Manohar

From a package file

1. Download `jugnu-1.0.0.vsix`.
2. Open the Command Palette with Ctrl+Shift+P (Cmd+Shift+P on macOS).
3. Run **Extensions: Install from VSIX...** and choose the downloaded file.
4. Reload the window when asked.

> To update, install the newer version the same way. To remove Jugnu, open the Extensions view, find Jugnu for go_router and choose Uninstall.

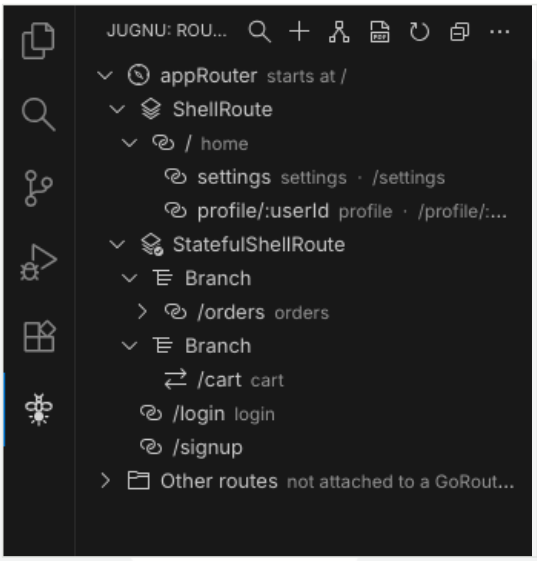

jugnu 1.0.0 · Sanket Santosh Vidya Manohar

SECTION 4

Getting started

1. Open the folder of a Flutter app that uses go_router.
2. Select the **Jugnu** firefly icon in the activity bar. The Routes view lists every route it found.
3. Select a route to open its builder in the editor.
4. The first time Jugnu starts, it opens a short walkthrough. You can open it again at any time with **Jugnu: Open Walkthrough**.

The Routes view: a router with a shell route, a stateful shell with two branches, and top-level routes.

SECTION 5

Routes view

The Routes view shows your GoRouter configuration as a tree. It understands nested routes, ShellRoute, StatefulShellRoute with its branches, and typed routes. Route lists kept in other files, such as `routes: [...authRoutes]`, and paths stored in constants, such as `path: AppPaths.home`, are followed.

Action	How
Open a route's builder	Select the route
Open the GoRoute definition	Right-click and choose **Open Route Definition**
See every call that uses a route	Right-click and choose **Show Usages**
Copy the full path or the name	Right-click and choose **Copy Path** or **Copy Route Name**
Add a child route	Select the + button on the route
Find the route under the cursor	In a Dart file, right-click and choose **Reveal Route in Routes View**

© 2026 Sanket Santosh Vidya Manohar

Action	How
Search all routes	Select the search button, or run **Jugnu: Go to Route...**

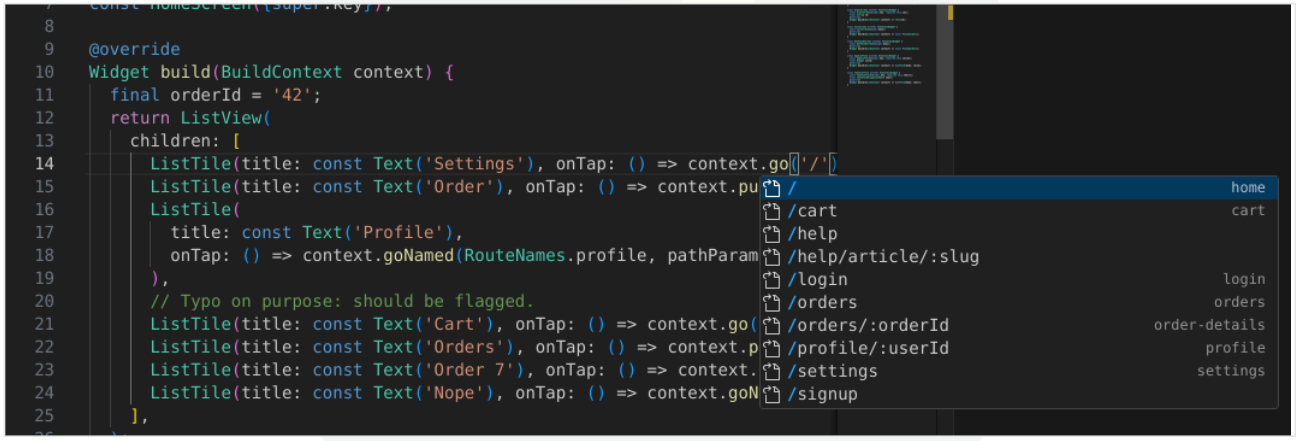

Routes that are defined but not attached to any router appear under "Other routes".

SECTION 6

Path and name completion

Inside `context.go('`, `push`, `pushReplacement`, `replace`, `goNamed`, `pushNamed` and the related calls, Jugnu suggests the real paths or route names.

1. Type `context.go('` in a Dart file.
2. Pick a path from the list.
3. If the path has parameters such as `:orderId`, press Tab to move between them and fill them in.

Path suggestions inside a navigation call, with the route name shown on the right.

SECTION 7

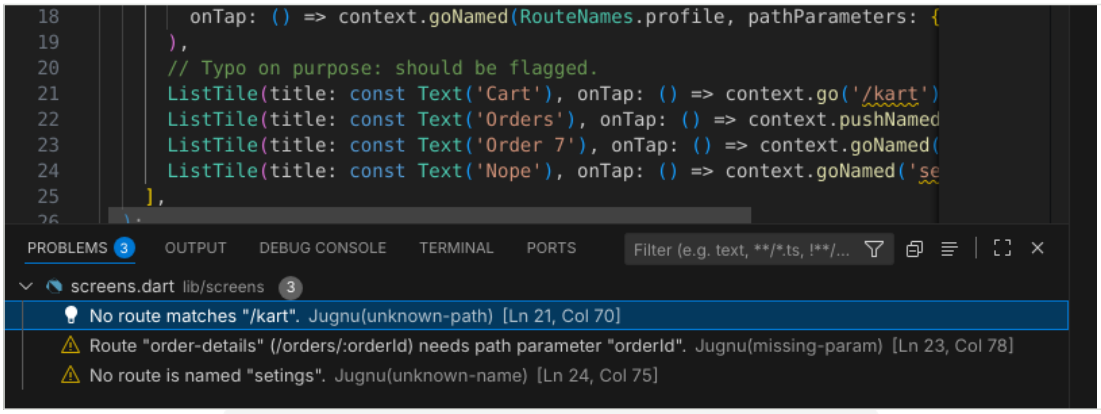

Warnings and quick fixes

Jugnu checks navigation calls as you type and lists problems in the Problems panel.

Warning	Example
A path that matches no route	`context.go('/kart')`, with a "did you mean /cart" quick fix
An unknown route name	`goNamed('settngs')`
A missing path parameter	`goNamed('order-details')` without `orderId`
An extra path parameter	A parameter the route does not take
Two routes with the same name	Both definitions are marked

© 2026 Sanket Santosh Vidya Manohar

1. Hover over the underlined text to see the message.
2. Press Ctrl+. (Cmd+. on macOS) to see the quick fixes, and pick one.

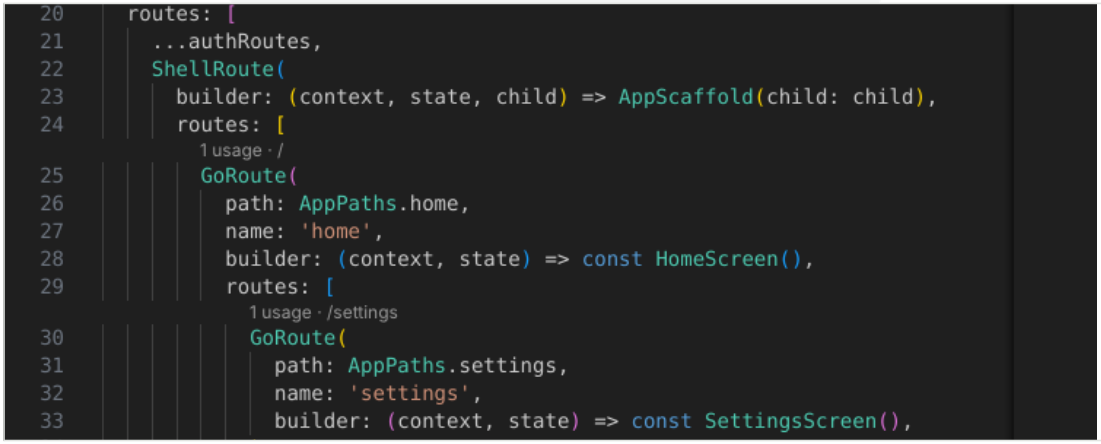

Unknown path, unknown name and missing parameter warnings in the Problems panel.

SECTION 8

Moving around your routes

Action	How
From a path or name to its route	Go to Definition (F12) on the string
From a route to every call that uses it	Find All References (Shift+F12) on the route
Route details	Hover over a path or name
Usage count	Shown above each route definition; select it to list the calls

Usage counts above each route definition.

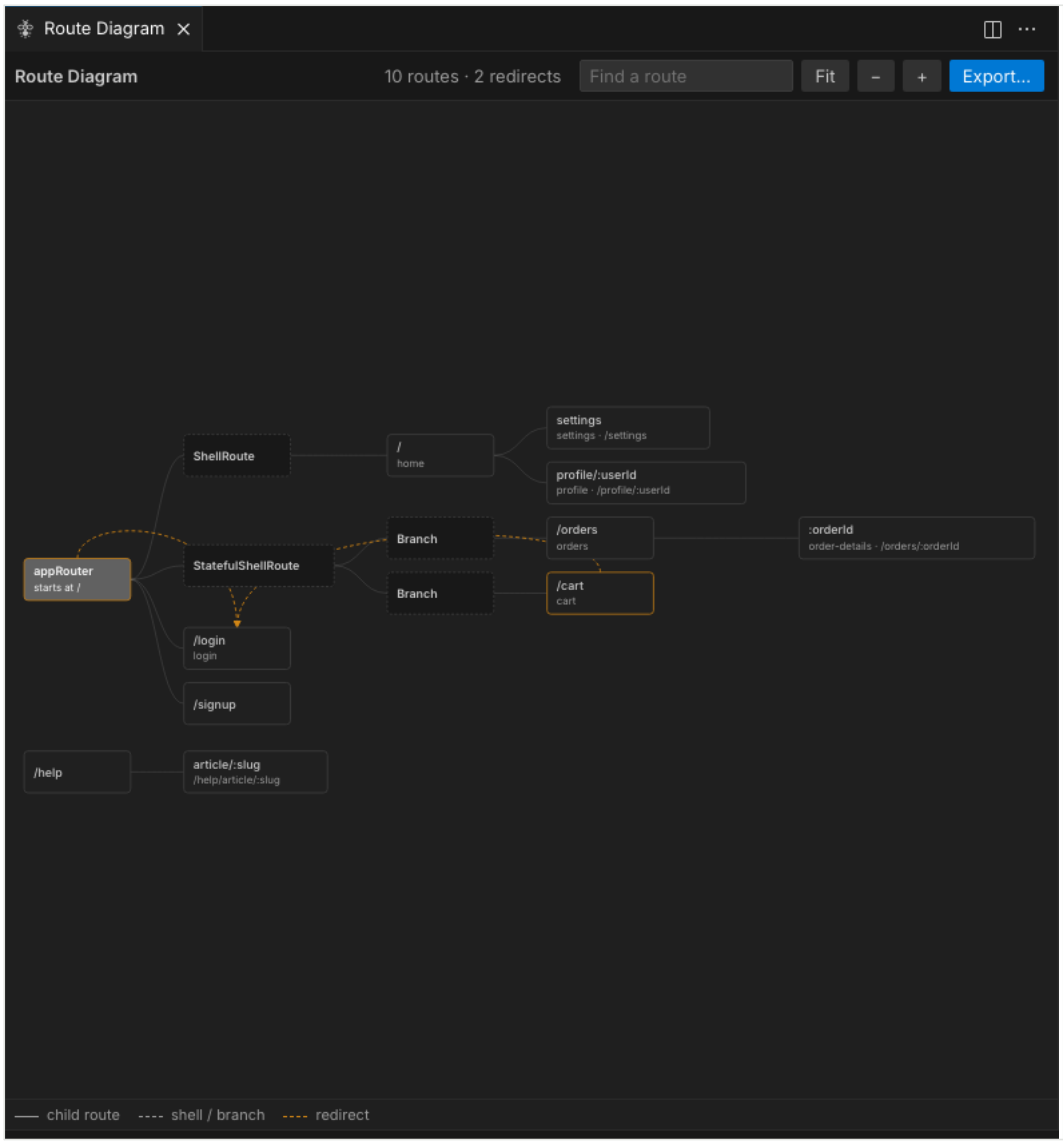

© 2026 Sanket Santosh Vidya Manohar

SECTION 9

Route diagram

The route diagram draws the whole route tree, with redirects as dashed lines.

1. Run **Jugnu: Show Route Diagram**, or select the diagram button in the Routes view.
2. Use the search box to find a route. Drag to pan and use the buttons or the mouse wheel to zoom.
3. Select a route to open its code.
4. To save it, select **Export...** and choose SVG, PNG or flowchart markup.

The route diagram with shell routes, branches and two redirects.

SECTION 10

Adding and converting routes

Add a route

1. Run **Jugnu: Add Route...**, or select + next to a route in the Routes view.
2. Choose where the route goes: under a router or under a parent route.
3. Enter the path, then an optional name.
4. Jugnu inserts the GoRoute and opens it so you can fill in the builder.

Convert to a typed route

1. Place the cursor on a GoRoute.
2. Open the light bulb menu with Ctrl+. (Cmd+. on macOS) and choose **Convert to Typed Route**.
3. Run **Jugnu: Run build_runner** to generate the typed route code.

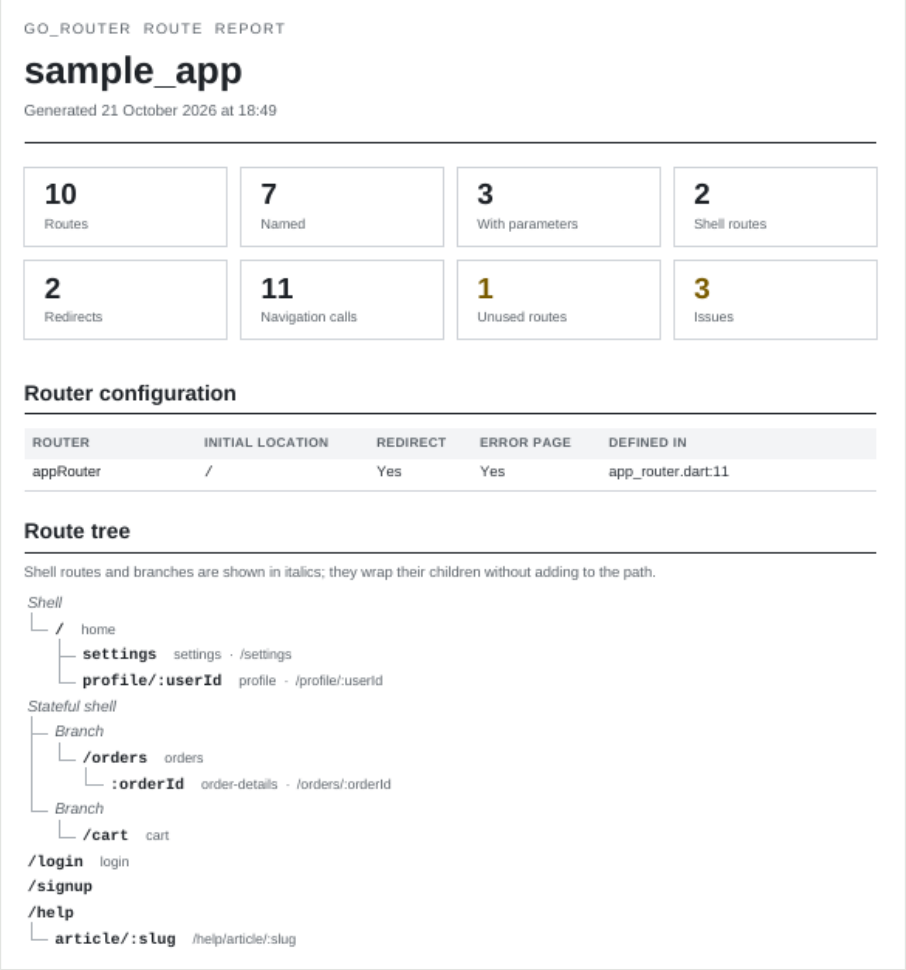

SECTION 11

Route reports

A route report is a printable PDF of your routes: a summary, the router configuration, the route tree, every route with its usage count, open issues, unused routes and redirects.

1. Run **Jugnu: Generate Route Report (PDF)...**, or select the PDF button in the Routes view.
2. Choose where to save the file.
3. Enter a password. The report is encrypted with AES-256 and opens only with that password.

GO_ROUTER ROUTE REPORT

sample_app

Generated 21 October 2026 at 18:49

10	7	3	2
Routes	Named	With parameters	Shell routes
2	11	1	3
Redirects	Navigation calls	Unused routes	Issues

Router configuration

ROUTER	INITIAL LOCATION	REDIRECT	ERROR PAGE	DEFINED IN
appRouter	/	Yes	Yes	app_router.dart:11

Route tree

Shell routes and branches are shown in italics; they wrap their children without adding to the path.

Shell
- / home
  - settings settings · /settings
  - profile/:userId profile · /profile/:userId

Stateful shell
- *Branch*
  - /orders orders
    - :orderId order-details · /orders/:orderId
- *Branch*
  - /cart cart

/login login
/signup
/help
- article/:slug /help/article/:slug

The first page of a route report.

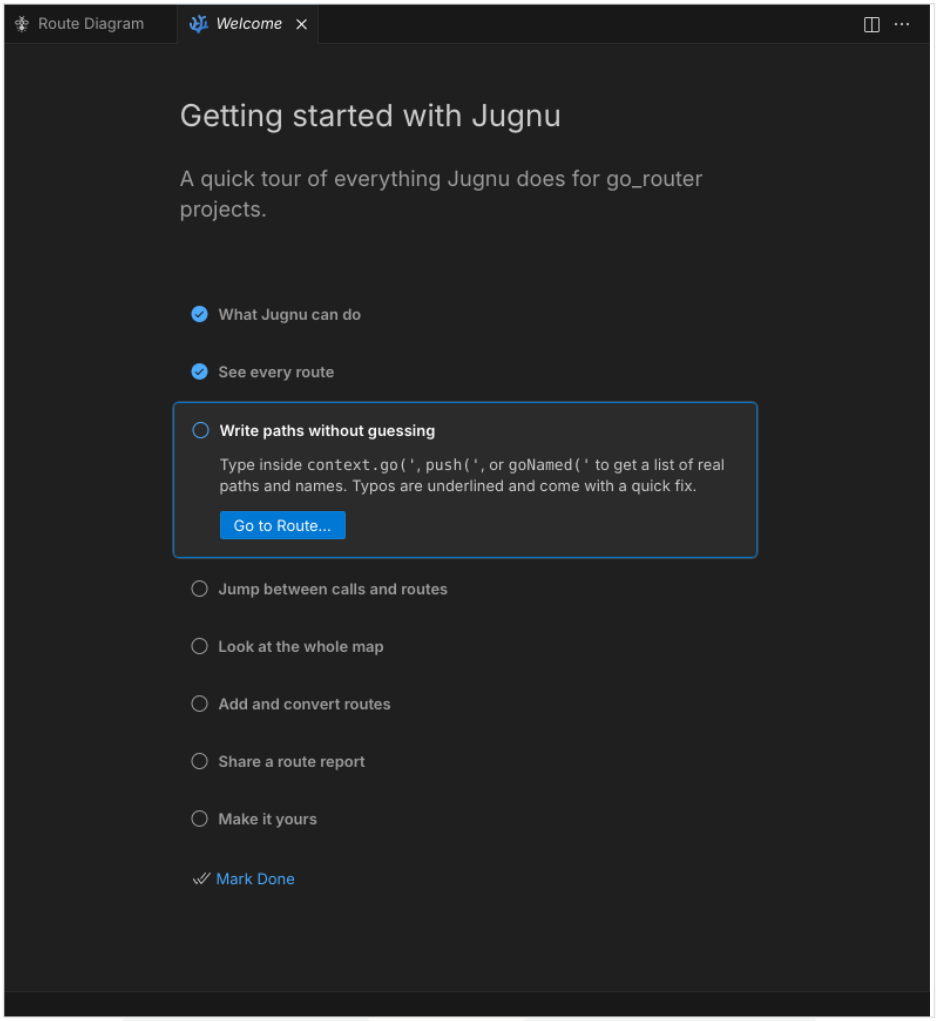

To create reports without a password, turn off `jugnu.report.passwordProtect` in settings.

SECTION 12

Walkthrough

The walkthrough goes through each feature with a button to try it. Open it with **Jugnu: Open Walkthrough**.

© 2026 Sanket Santosh Vidya Manohar

The getting started walkthrough.

SECTION 13

Commands

Open the Command Palette with Ctrl+Shift+P (Cmd+Shift+P on macOS) and type "Jugnu".

Command	Description
Jugnu: Go to Route...	Search all routes by path or name
Jugnu: Add Route...	Add a GoRoute under a router or a parent route
Jugnu: Show Route Diagram	Open the route diagram
Jugnu: Export Route Diagram...	Save the diagram as SVG, PNG or flowchart markup
Jugnu: Generate Route Report (PDF)...	Write a password-protected report
Jugnu: Convert to Typed Route	Convert the GoRoute under the cursor
Jugnu: Run build_runner	Generate code for typed routes

© 2026 Sanket Santosh Vidya Manohar

Command	Description
Jugnu: Reveal Route in Routes View	Find the route under the cursor in the tree
Jugnu: Refresh Routes	Read the workspace again
Jugnu: Open Walkthrough	Open the getting started guide

SECTION 14

Settings

Open Settings and search for "jugnu".

Setting	Default	Description
`jugnu.diagnostics.enabled`	`true`	Warnings for unknown paths, names and parameters
`jugnu.codeLens.enabled`	`true`	Usage counts above route definitions
`jugnu.report.passwordProtect`	`true`	Encrypt route reports with a password
`jugnu.exclude`	`[]`	Extra folders to skip, for example `**/test/**`
`jugnu.showWalkthroughOnStartup`	`true`	Open the walkthrough the first time

SECTION 15

Working with the jugnu package

The extension works on its own. Adding the jugnu package to your app gives you two extras that fit with it.

Deep links from the terminal

```
dart run jugnu:deeplink                                    # list routes
dart run jugnu:deeplink product id=3 --scheme https --host shop.example.com
```

Live navigation stack

Call `JugnuDebug.attach(router)` in your app's `main` function. In debug builds, the app then shares its current navigation stack with development tools. See the jugnu Package Guide for details.

© 2026 Sanket Santosh Vidya Manohar

SECTION 16

Limits and troubleshooting

Jugnu reads source code; it does not run it. Routes built in loops or from values only known at runtime cannot always be placed. They appear with a warning icon, and unknown-path warnings are turned off while any route path is unresolved, so you do not get false alarms.

Problem	Solution
The Routes view is empty	Open the folder that contains `pubspec.yaml`, then run **Jugnu: Refresh Routes**.
A route is under "Other routes"	It is defined but not reachable from a router, or reached through code Jugnu cannot follow.
A warning is wrong	Check whether the path is built at runtime. You can turn warnings off with `jugnu.diagnostics.enabled`.
Generated or test files appear	Add their folders to `jugnu.exclude`.
A report will not open	Use the password entered when the report was created. It cannot be recovered.

SECTION 17

Privacy

Jugnu works entirely on your computer. It collects no usage data, has no analytics and makes no network requests. Your code is read only to build the route list, diagrams and reports, and is never sent anywhere. Reports are saved only where you choose.

SECTION 18

Disclaimer
